

PROFILE

I'm Geoffrey Brennan, a product leader with more than 20 years' experience building products across AI, enterprise SaaS, manufacturing technology and industrial design. My career has moved from industrial design through UX leadership into product management, and each stage continues to shape how I work today.

I enjoy working at the edge of technical complexity and customer value. I'm comfortable discussing manufacturing constraints, design trade-offs and commercial strategy in the same conversation.

My strength is turning difficult, engineering-heavy problems into products customers trust and adopt. I lead from discovery through roadmap design, delivery and go-to-market, while staying close enough to the work to help teams make the right decisions.

Whether it's AI in manufacturing, digital tooling for dental practices, or clinical workflows, I care most about building software that creates measurable value without hiding the complexity.

SELECTED WORK

Teaching AI to think like a CNC programmer

ROLE SENIOR PRODUCT MANAGER**COMPANY** CLOUDNC**FOCUS** AI MANUFACTURING SOFTWARE**DURATION** 2023 – PRESENT

At CloudNC I lead product strategy for AI-powered manufacturing software that helps CNC programmers automate complex machining workflows without asking them to trust a black box. The problem is deeply technical and highly consequential: toolpaths, tolerances and machine behaviour all matter.

I work directly with machinists, engineers and AI researchers to understand where automation meaningfully reduces effort and where trust must remain explicit. It's product work shaped by real-world constraints.

Running five agile teams toward one coherent roadmap

ROLE PRODUCT MANAGER**COMPANY** CURVE DENTAL**FOCUS** PRACTICE MANAGEMENT SAAS**DURATION** 2019 – 2021

I owned product direction across five project teams, aligning roadmap, sequencing and metrics in a business-critical environment. The portfolio included permissions, billing and charting improvements shipped into software used by thousands of dental practices.

That work required a blend of discovery, prioritization and stakeholder trust: product decisions needed to be clear, measurable and defensible in a system where mistakes have immediate operational consequences.

Rebuilding perio charting from the clinic floor up

ROLE UX TEAM LEAD

COMPANY CURVE DENTAL

FOCUS CLINICAL WORKFLOW REDESIGN

DURATION 2017 – 2019

I led a redesign of perio charting, one of the most demanding clinical workflows in dental software, by validating against real workflows and building a more usable treatment flow for hygienists and dentists.

The result was a major lift in daily usage and a demonstration of the throughline between design rigor, product thinking and operational outcomes.

[DETAILED CASE STUDIES](#)

Roles and permissions overhaul

ROLE UX TEAM LEAD → PRODUCT MANAGER

COMPANY CURVE DENTAL

FOCUS ACCESS CONTROL & USER MANAGEMENT

OUTCOME 9-MONTH PATH TO GA

I led the redesign of Curve Dental's legacy roles-and-permissions system, which was blocking sales deals and exposing the business to security and fraud risks. Working across research, UX, architecture and rollout, I built a more granular, practice-appropriate model for custom roles, multi-site visibility and user management.

The release moved the product from an outdated, rigid setup to a centralised administration model that scaled from small practices to large DSOs. It also showed how a careful rollout plan, documentation and validation discipline matter as much as the UI itself.

Perio charting rebuild

ROLE UX TEAM LEAD / LEAD DESIGNER

COMPANY CURVE DENTAL

FOCUS CLINICAL WORKFLOW REDESIGN

OUTCOME 10× USAGE INCREASE

Perio charting had been built in Flash, was technically obsolete, and so frustrating to use that many hygienists defaulted to paper records. I led the redesign from research through to general availability, uncovering the real variation in how clinicians examined patients and building a system that supported multiple workflows instead of forcing one standard.

We built an SVG-based graphical model, a tabular view, keyboard-first interactions and configurable exam flows. The result was a production tool clinicians actually used and one that became a major differentiator in the product.

Billing system update

ROLE LEAD DESIGNER / PRODUCT MANAGER

COMPANY CURVE DENTAL

FOCUS BILLING WORKFLOW REFINEMENT

OUTCOME FASTER, CLEARER AND MORE SCALABLE BILLING

The billing module overhaul focused on preserving the familiar logic of the legacy experience while making the most important actions more visible and less error-prone. I shaped the redesign around task isolation, smarter defaults, clearer filtering and a cleaner ledger experience for busy practice teams.

By improving visibility, payment and invoice flows, and the underlying structure of the module, the rebuild made the product easier to use while creating a stronger base for future feature work.

EXPERTISE

Product strategy	Roadmapping	AI product development
